

csmp::Boundary::CreateFrom

csmp::Boundary::CreateFrom

csmp::Boundary::Initialize
BoundaryFlags

```
graph LR; A[csmp::Boundary::CreateFrom] --> C[csmp::Boundary::InitializeBoundaryFlags]; B[csmp::Boundary::CreateFrom] --> C;
```

The diagram illustrates a flow where two separate calls to the function `csmp::Boundary::CreateFrom` (represented by white boxes on the left) both point via blue arrows to a single function `csmp::Boundary::InitializeBoundaryFlags` (represented by a gray box on the right). This suggests that the initialization logic is shared or that both creation functions eventually lead to the same initialization step.
