

csmp::ImplicitTransport  
::AdvectVariable

csmp::ImplicitTransport  
::TimeIncrement

csmp::ImplicitTransport  
::TimeIncrementAndFluxBalance

```
graph LR; A["csmp::ImplicitTransport  
::AdvectVariable"] --> C["csmp::ImplicitTransport  
::TimeIncrementAndFluxBalance"]; B["csmp::ImplicitTransport  
::TimeIncrement"] --> C;
```

The diagram illustrates a relationship between three code components. On the left, there are two separate boxes. The top box contains the text 'csmp::ImplicitTransport' followed by '::AdvectVariable' on a new line. The bottom box contains 'csmp::ImplicitTransport' followed by '::TimeIncrement' on a new line. Blue arrows point from the right side of each of these two boxes to a single, larger box on the right. This box has a gray background and contains the text 'csmp::ImplicitTransport' followed by '::TimeIncrementAndFluxBalance' on a new line. This suggests that both 'AdvectVariable' and 'TimeIncrement' are inputs or components that contribute to the 'TimeIncrementAndFluxBalance' calculation.
