```
graph LR; A[csmp::IsoparametricQuadratic Pyramid::dN_AtIntegrationPoint] --> D[csmp::IsoparametricQuadratic Pyramid::Volume]; B[csmp::IsoparametricQuadratic Pyramid::InnerRadius] --> D; C[csmp::IsoparametricQuadratic Pyramid::JacobianAtIntegrationPoint] --> D; E[csmp::IsoparametricQuadratic Pyramid::N_AtIntegrationPoint] --> D;
```

The diagram illustrates a data flow where four separate inputs are combined into a single output. On the left, there are four white rectangular boxes, each containing a C++-style identifier for a specific attribute of the `csmp::IsoparametricQuadratic Pyramid` class. Blue arrows originate from the bottom-right corner of each of these four boxes and point towards the top-left corner of a single, larger gray rectangular box on the right. This gray box represents the `Volume` attribute, which is the final result of the combination of the four inputs.
