```

The diagram illustrates a dependency or inheritance structure. On the left, there are four white rectangular boxes, each containing a C++-style identifier for a function or method. On the right, there is a single gray rectangular box containing another C++-style identifier. Four blue arrows originate from the right side of each white box and point towards the left side of the gray box, indicating that the four functions on the left are related to or depend on the function in the gray box.
