

csmp::ModelTopology  
::EliminateCellTypes

csmp::ModelTopology  
::EliminateLineCells

csmp::ModelTopology  
::EliminateSurfaceCells

csmp::ModelTopology  
::EliminateVolumeCells

csmp::ModelTopology  
::EliminateCellType

```
graph LR; A[csmp::ModelTopology::EliminateCellTypes] --> D[csmp::ModelTopology::EliminateCellType]; B[csmp::ModelTopology::EliminateLineCells] --> D; C[csmp::ModelTopology::EliminateSurfaceCells] --> D; E[csmp::ModelTopology::EliminateVolumeCells] --> D;
```

The diagram illustrates a consolidation of four separate elimination methods into a single, unified method. On the left, four white rectangular boxes are stacked vertically, each containing a method name from the `csmp::ModelTopology` namespace: `::EliminateCellTypes`, `::EliminateLineCells`, `::EliminateSurfaceCells`, and `::EliminateVolumeCells`. On the right, a single gray rectangular box contains the name of the unified method: `::EliminateCellType`. Four blue arrows originate from the right side of each white box and point towards the left side of the gray box, indicating that the functionality of the four individual methods is being merged into the new, single method.
