

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class csmg_SAMG_Exception["csmg::SAMG_Exception"]
    csmg_SAMG_Exception --|> std_exception
```

The diagram shows a class hierarchy. At the top is a box for 'std::exception' with two empty slots below the name. Below it is a box for 'csmg::SAMG_Exception' which is shaded gray. A blue arrow with an open triangle head points from the 'csmg::SAMG_Exception' box up to the 'std::exception' box, indicating inheritance.

csmg::SAMG_Exception

- + SAMG_Exception()
- + SAMG_Exception()
- + ~SAMG_Exception()
- + what()
- + ierr()
