

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class io_error_base["io::error::base"]
    io_error_base --|> std_exception
```

The diagram illustrates an inheritance relationship. At the top is the 'std::exception' class, represented by a white box with a grey border, divided into three horizontal sections. The top section contains the text 'std::exception', while the other two are empty. Below it is the 'io::error::base' class, represented by a grey box with a grey border, also divided into three horizontal sections. The top section contains 'io::error::base', the middle section contains '+ error_message_buffer', and the bottom section contains '+ format_error_message()' and '+ what()'. A blue arrow with a hollow triangular head points from the top of the 'io::error::base' box to the bottom of the 'std::exception' box, indicating that 'io::error::base' inherits from 'std::exception'.

io::error::base

+ error_message_buffer

+ format_error_message()

+ what()
